

PRESIDENT JOE BIDEN'S PROSTATE CANCER

Met Joe Biden on Broadway but didn't ask him about his PSA Thought White House would... Now metastatic stage 4 Gleason 9 prostate cancer spread to his bones. His life & health could have changed with Dr Lederman's prostate care. For you or your loved ones prostate cancer care, see Dr Lederman — if you wish New York's only Harvard-trained triple-board certified radiation oncologist — with 9,000 prostate cancers treated for cure over decades. Check our data. Innovation with enviable results — Avoid radical surgery's failure, incontinence, impotence, shortening. Most insurances, Medicare, Medicaid accepted Call Dr. Lederman 212-CHOICES. Benefit from early detection & Dr Lederman's experience & innovation! If President's cancer slips through White House Doctors, might yours too? See Dr Lederman Best wishes Mr President!

Old Tests are Ancient History - Useless!

President Biden's PSA was normal 11 years ago. Never repeated. Now aggressive, Gleason 9, stage 4 prostate cancer spread to bones. Even if you've had testing in past - if not current - it's time to meet Dr. Lederman. Old tests are ancient history. Useless. Stay up to date with Dr Lederman's best testing.

Don't get caught like Biden with stage 4 cancer. Seek improved survival. Don't be sorry, be safe with Dr. L.

President Biden had no prostate cancer screening - now has aggressive Gleason 9, stage 4 prostate cancer spread to his bones. Biden states his "prognosis is good."

Not true. Prognosis is terrible. Biden could use his calamity helping others saying, "I missed my chance to be checked for prostate cancer. Don't miss yours."

Don't be one of 35,000 who die annually of prostate cancer. A great reason to meet Dr Lederman. You're welcome here.

Story goes, Heavyweight Champ Muhammad Ali declined to use his plane seatbelt. Ali said, "Superman doesn't need a seatbelt." Hostess replied, "Superman doesn't need a plane to fly!" Ali buckled. The lesson? We're all human – subject to frailties, even cancer. Why visit Dr L? Cancer can be lurking anywhere! For new or recurrent cancer treatment, call Dr L. No Kryptonite – just facts! First in America! Dr. L's RSNY — Home of the Super Healthy!

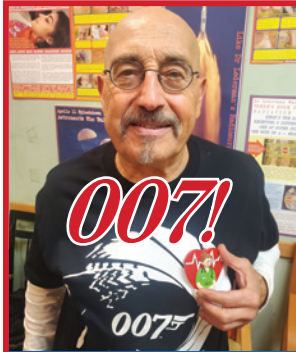

Superman!

DR LEDERMAN'S DATA!!!

Dr Lederman's Prostate Cancer Questions

About 300,000 American men are diagnosed with prostate cancer annually.

Despite radical or robotic prostate cancer surgery's multiple failures including significant rates of cancer progression, high rates of sexual impotence, urinary leakage and penis shortening, American men are frequently treated with surgery.

Ralph Florio, saw his PSA tripled & he wisely requested a biopsy which confirmed Prostate Cancer. His surgeon suggested surgery because he was young & in great shape. Ralph is smart & knew surgery would most likely harm his way of life, result in impotence, leakage & shortening.

20 years ago he came to Dr L & chose to be treated. We call him 007, not because he's James Bond, but because his PSA is 0.07 twenty years after Dr L's treatment! No Chemo, no hormones, no surgery, just Dr L! 007 is healthy & happy!

So why do men choose surgery without knowing all the facts? Is it because most other physicians, facilities & hospitals don't offer comparison data like Dr Lederman - who uniformly presents prostate cancer data to every patient and their loved ones?

Surgery isn't so great - with terrible quality-of-life damage - includes urinary, sexual, physical issues - not to mention cancer RECURRENCE RATES AFTER SURGERY. Dr Lederman discusses cancer-free survival data that emphasizes the benefits of the unique prostate cancer treatment at Radiosurgery New York!

Dr Lederman suggests every man who does not have a diagnosis of prostate cancer should know his PSA and risk factors for having prostate cancer. Many men seek Dr Lederman's consultation to learn about prostate cancer diagnosis and what should be done if diagnosed with cancer - or not - and need for further care.

These are important topics for every man and their loved ones!

Top RT Executive Chooses...

Where does New York's top radiation executive, who knows every radiation doctor & hospital for 40 years, go for his own prostate cancer treatment? He chose Dr Lederman. He's in remission, PSA 0. Healthy & happy!

Doesn't that tell you everything you need to know? A real life story - Dr Lederman is his doctor. Shouldn't Dr Lederman be your MD?

Why? Is it because the man diagnosed with prostate cancer has a biopsy by the same Urologist Surgeon who frequently advocates for radical surgery?

Is it because hospitals often promote lucrative surgical procedures having invested millions in equipment, operating rooms & staff?

Is it because patients are not informed fully of all risks, benefits and alternatives prior to surgery? After seeing 1000s with prostate cancer and having treated more than 9,000, it is obvious most don't receive adequate information about their cancer and treatment options before meeting Dr Lederman.

Many men who have had radical prostate surgery do not reveal the devastating side effects of surgery even to their closest friends. This leaves more men in the dark about about surgery.

Seems many who've had radical prostate surgery are embarrassed of surgery's side-effects - impotence, leakage, penis shortening and frequent cancer recurrence.

Some men after surgery tell me they've had no side-effects from the surgery. Then I ask, "are you impotent?" Then they say, "yes, I lost all my erections since the surgery!"

Then I ask, "do you leak urine since prostate surgery?" and they say, "yes, I've been leaking urine since radical surgery!" I ask if their penis was shortened after the radical prostate surgery? They usually respond, "yes, in fact my penis was shortened!"

Then I ask, "why do you tell me that you have no side-effects from surgery, when asked about side-effects from prostate surgery?" Most respond they were never questioned before and many say they are too embarrassed to confess what happened from radical prostatectomy.

Dr Lederman's Prostate Cancer Answers

When men with prostate issues see Dr L, first step is to make the proper diagnosis.

If cancer is found, it's best to determine cancer's extent. Localized in prostate vs metastases. If traveled, to where? That means proper testing. Multiple tests determine cancer's location. Dr Lederman aims for best treatment results with best quality of life possible for each person.

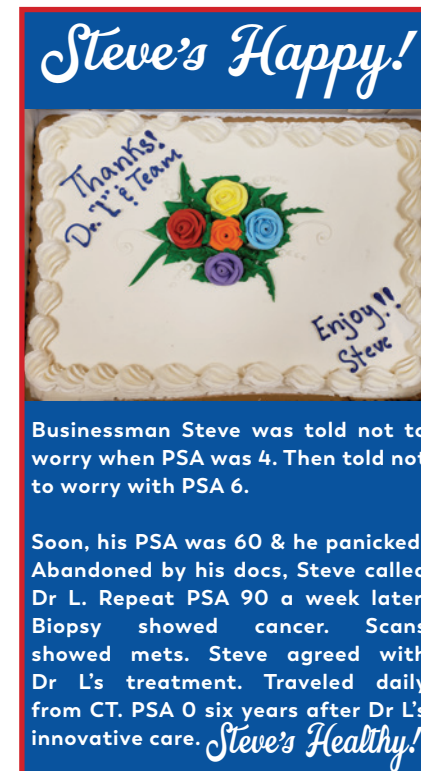

Some men come having prior prostate cancer treatment. Prior cancer treatment changes therapeutic options.

For men who've had radical/robotic prostate cancer surgery, the PSA level should remain at zero with no other treatment. If PSA is more than zero, most likely cancer is left behind. Cancer that is left behind grows - threatening the patient's life & quality of life.

VERY IMPORTANTLY, there is possible salvage radiation treatment for men whose prostate cancer recurs after radical/robotic surgery. It's best to speak directly with Dr Lederman to learn the most about this. SO IMPORTANT!

Be aware that certain treatments - anti-androgens - and other meds like Finasteride - artificially suppress the PSA. Don't be deceived by this. So important to meet Dr Lederman personally.

Having surgery first, isn't a great strategy since it causes sexual impotence, urinary leakage, & penis shortening in many. Plus treatment failure! Unsuccessful prostate cancer surgery includes leaving cancer behind & treatment failure. Cancer may spread from local areas to sites throughout the body. We fight to cure cancer whenever possible - including after failed surgery or systemic treatment!

Businessman Steve was told not to worry when PSA was 4. Then told not to worry with PSA 6.

Soon, his PSA was 60 & he panicked! Abandoned by his docs, Steve called Dr L. Repeat PSA 90 a week later. Biopsy showed cancer. Scans showed mets. Steve agreed with Dr L's treatment. Traveled daily from CT. PSA 0 six years after Dr L's innovative care. *Steve's Healthy!*

An American F4 Fighter Hero Pilot...

Met Dr L about his prostate cancer - He's 73 & dad had prostate cancer - 2 years ago PSA rose to 8.5 - with positive biopsy + Gleason 6 in one core. His MD said, It was "low risk prostate cancer" - "DON'T WORRY & DON'T TREAT!" SADLY, he took that advice...

Today? PSA doubled to 17.5 - Bone scan shows mets - stage 4 cancer. MRI lymph node+.

Last year, his localized cancer had a 90% success rate IN OUR HANDS.

NOW ALL IS OPPOSITE. Fighter pilot is fighting for his life & comes to Dr L to create a cancer treatment - to get him in remission & extend life. This is the work we do! Treating men with prostate cancer. Reasons to consider consultation with Dr Lederman. *Don't Let Your Life Fly Away!*

The importance of PSA, pathologic and radiographic findings may indicate need for treatment. Men who have had unsuccessful radical robotic prostate surgery may have a second chance for cure using sophisticated and highly-focused radiation - especially that pioneered by Dr Lederman - first in the Western Hemisphere!

Dr Lederman's treatment with recurrent prostate cancer after unsuccessful surgery is non-invasive, outpatient, performed in minutes with no cutting, no bleeding. It's most commonly well tolerated. We accept most insurances, Medicare, Medicaid. Super-conveniently located in the heart of Manhattan near subways, buses, & trains by Times Square.

Best is to meet Dr Lederman to discuss all issues & answer all questions. No substitute for that!

MANY LIVES SAVED STARTING WITH WITH DR LEDERMAN'S CONSULTATION.

Mr Johnny Braggs! 20 Years+ After Dr L's Treatment!

"It's Johnny Braggs talking prostate cancer. In 2004, I came to Dr Lederman with prostate cancer. It was serious. My stepfather died days after prostate surgery, my uncle never recovered from prostate surgery.

I came to Dr Lederman with prostate cancer and high PSA. Dr L explained all options, shared his and comparison results. I trusted Dr L more than 20 years ago. Today I trust Dr Lederman even more.

My prostate cancer is gone for 20 years, and my PSA is 0.0 No chemo, no hormones, no surgery - Just Dr Lederman's treatment. My quality of life is great.

You can trust Dr Lederman, too. Like me, for over 20 years. Call Dr Lederman for prostate cancer consultation & treatment, if you wish. I called Dr Lederman and it changed my life!"

MANY MEN WITH PROSTATE CANCER HAVE RADICAL/ROBOTIC SURGERY. WHY? NOT BECAUSE IT'S BETTER!

DR L WILL SHOW YOU COMPARISON DATA BY STAGE, GLEASON SCORE, PSA FROM CENTERS ACROSS USA! YOU'LL UNDERSTAND GREAT BENEFITS GAINED BY CARE WITH DR LEDERMAN!

RADICAL/ROBOTIC PROSTATE SURGERY IS INVASIVE & RESULTS IN IMPOTENCE & LEAKAGE IN MOST. PROSTATE SURGERY REMOVES A MAN'S PROSTATE & URETHRA CAUSING PENIS SHORTENING - HIGH RATES OF IMPOTENCE AND LEAKAGE. DR LEDERMAN'S WORK IS DRAMATICALLY DIFFERENT. MEN CHOOSE DR L FOR BETTER RESULTS & BETTER QUALITY OF LIFE!

DON'T CHOOSE RADICAL PROSTATE SURGERY JUST BECAUSE UROLOGIST DOES YOUR BIOPSY. CHOOSE THE BEST MD FOR BEST RESULTS / QUALITY OF LIFE! EDUCATED MEN COMMONLY CHOOSE DR L'S UNIQUE PROSTATE CANCER TREATMENT - 9,000 MEN HAVE!
